

Science Animation Midi-Pyrénées

What are we about?

Presenting and discussing the burning issues of science, its new orientations and applications, in order to meet a growing demand on the part of the general public and young people, by developing educational projects (exhibitions, workshops, lectures, events...) for the past 25 years in close cooperation with players from the French Strategic Council for Information Technologies, or CSTI (associations, research establishments, industry...).

Our project

We would like to study cancer communication within Europe, mainly to young people (15-25 years old). To do that, first we would need to get an inventory of the initiatives carried on in each European country. More particularly, we are interested in social network initiatives.

So we would appreciate if you could provide us a list of foundations and organisms that are involved in cancer communication in your country, as well as initiatives of particular interest.

Thank you in advance for your help.

Best regards,

Claire Sanchez
