

An abstract expressionist painting featuring a complex composition of colors and textures. The palette is dominated by warm tones of yellow, ochre, and orange, interspersed with cooler shades of blue and grey. The brushwork is visible and expressive, with thick applications of paint and some areas where the underlying canvas is exposed. The overall effect is one of dynamic energy and organic form.

MIKROKOSMOS

Observing the small we can understand the biggest.
The astrophysics study the atoms behaviors for
understand the stars.

By the new abstract expressionism MIKROKOSMOS
is an action painting exercise test that reflect one
specific moment of the cosmos from a small point by
the abstract shapes and colors language, where the
small become a map of the biggest.

The structure of the universe is conforming as
dimensional layers one over the other. The mater
depart from subatomic levels to the galaxy cumulous.
Many phenomenon of the nature in their structure
driving the laws of the fractals principles are leading
the behaviors and self-organization forming new
dimensions one inside other like an infinite spiral.
The fractal principles confirm that on the part is
reflected the whole. All dimensions are connected
and each part is a mirror where the rest of the whole
is reflected. Each point is an universe for his self and
if putting attention there all is expanding forming the
whole again each time.
